README

First stab at analyzing the impact of ESA 2012 tweets. Note that I don't have any raw data yet, these are analytics that I've scraped from the Topsy API.

You can find a few plots in tweet_analysis.md

How the analysis works

1. First open Terminal.

2. Then run the following command to run all the R code and generate figures.

```
Rscript -e "library(knitr); knit('IEE_manuscript.Rmd');"
```

3. Then we generate a PDF and add in all the citations

```
pandoc IEE_manuscript.md -o IEE_manuscript.pdf
```

Once we have stuff to cite:

```
pandoc -s -S --bibliography IEE_citations.bib IEE_manuscript.md -o IEE_manuscript.pdf
```

4. Open IEE_manuscript.pdf,

5. done!
